

SHADE SAILS MADE FOR LIFE AND LIFESTYLE

With a passion for designing and building beautiful outdoor living spaces, Tenshon® has excelled at creating shade sails that enhance quality of life.

To match their high quality standards, GORE® TENARA® Sewing Thread was selected as the sewing thread used in every shade sail Tenshon® manufactures. "I have tensile structures that were built twelve years ago and have never had an issue with the TENARA Sewing Thread. I've even had structures survive a hurricane, with no impact to the thread," says Matthew Dickerson, CEO and Owner of Tenshon, LLC.

Tenshon relies on TENARA sewing thread to outlast the fabric in which it is sewn. In order to produce the highest quality products, Tenshon® realizes that high quality materials must also be used, too.

TENARA® Sewing Thread is the perfect match for shade sails – it remains strong after prolonged UV exposure, resists mildew, and is chemically resistant to cleaning solutions.

Application

- Shade sail

Challenges

- Extended UV exposure
- Significant tension applied during shade sail construction process and through lifetime of use

Benefits of GORE® TENARA® Sewing Thread

- UV resistant
- Chemically resistant to salt water, cleaning solutions, dirt, and essentially all liquids
- Stain resistant
- Does not absorb water; resists mildew, rot and decay
