

# APPLICATION TESTING FOR BIOSTIMULANTS AND ORGANIC FERTILIZERS

## Step 1:

Fill container with product to the required volume or level (recommended minimum number of tested containers: 3–5).

Seal the container with the vented cap under the normal manufacturing conditions.

## Step 5:

After 10 min check for leaks and/or bloating.

**YES:** The cause needs to be identified.

**NO:** Please move forward with step 6.

## Step 2:

Once the container is filled, tilt the container to ensure that the liquid has fully contacted the cap insert.

## Step 6:

Keep the container in the upright position. Expose the container to the expected temperatures during transportation and storage (preferably 40–50 °C) for 2–3 weeks.

## Step 3:

Gently slide the container back and forth for about 15 seconds.

## Step 7:

Once a day repeat Step 3 and 4 and observe the containers for any distortion (bloating, collapsing or leakage).

## Step 4:

Wait for about 10 min.

## Precautions

- Do not open the caps during the test, unless there is a leak or another safety risk
- If containers are monitored outside, keep them sheltered from the rain (to prevent water from entering through the venting holes)

## Observations

	Temperature	Date / Time	Action	After 10 mins deformation or leak? Y/N	Comments
Day 1			Tilt & Slide		
Day 2			Slide
